

Strantrol® Controller Accessories

Flowcell and Sensors

Flow Switch

The flow switch ensures that chemicals will always be fed into a flowing water stream, to eliminate bather contact dangers. Any no-flow alarm conditions signals the controller to shut off all chemical feed circuits immediately. We use a paddle-wheel style flow switch with a see-through cover and an "ON STREAM" indicator light.

Flowcell

A properly designed flowcell ensures the perfect sensor-water contact. Without it, the sensor is effectively blind. Our flowcell incorporates an automatic air purging chamber with a see-through inspection cover. A pressure gauge, sampling cock, isolating valves and a flow switch complete the installation.

Proprietary Sensors

The pH (yellow), HRR® (blue) and HRR® (red) sensors contain proprietary inorganic gel. Each sensor contains a high volume of the inorganic gel which guarantees an extremely long life.

The pH (yellow) sensor is specifically designed to complement our Strantrol® controllers. Its unique liquid junction incorporates porous Teflon® coating, to minimize clogging and prolong sensor life.

The HRR® (blue) sensor utilizes 99.999% pure platinum.

The HRR® (red) sensor utilizes a specialized metal wire which is designed for salt water or electrochlorination applications.
