Mystic White® II brand Pool Filter Sand

Mystic White® II is the premium pool filter sand. This special grade of sand is angular in shape and white in color, meeting the most exacting specifications of major manufacturers of sand filters. High quality and uniform grain size is achieved by carefully screening and grading the sand at our manufacturing facilities.

Unlike sand with ordinary rounded grains, the angular shape of Mystic White II contributes to many valuable features:

- Maximum entrapment of solids
- Filters out dirt, dust, leaves, insects, small stones, moss, oil, cosmetics, gum and other debris
- Minimizes packing, balling and channeling in the filter bed
- Assures uniform flow rate and sharp filtration
- Backwashes readily and is easy to use
- Safe to use; won't clog, calcify, stain, corrode and is odorless
- Ecologically safe; chemically inert and easily disposable around shrubs, plants, etc.

Mystic White II is appropriate for all makes of swimming pool Sand Filtration Systems, no matter the size, shape, flow rate or capacity. It is packaged in 50-lb. see-thru bags; double heat sealed to avoid leakage. The extra heavy gauge plastic bags are suitable for mass display indoors or outdoors.

Mystic White® II is now produced at our Columbia, South Carolina plant as well as Berkeley Springs, West Virginia.

Physical Properties:

Effective Size - .49 mm, .65 mm or .80 mm. (Other sizes available on request)

pH Value - 6.5

Hardness (Moh's Scale) - 7.0
