

New STARK Manway Cover with Viewport

We are excited to announce this new enhancement to our STARK filtration line. We chose this concept as the best overall balance between observation, pressure resistance, ease of retrofit, and cost impact. This new cover is rated for up to 100 psi operating pressure with a 4:1 factor of safety – twice that required by NSF Standard 50.

This enhancement builds on our previous developments such as our **6" Clear Backwash Valve** in making the industry's best filtration system even more convenient to maintain and operate.

NEW!

The benefits of observing inside the filter while it is in operation include:

- Confirm balanced flow, as indicated by a smooth, level sand bed.
- Detect channeling / uneven flow **before** water quality is affected.
- Confirm effectiveness of backwash – bed expansion and particulate removal.
- Provide an initial, visual indication of sand fouling.

This viewport is now included at no additional charge with all **wound** Stark filter systems, including:

Stark SS & 5S Series Filtration Systems

36", 42", & 60" Dia. Top Connection, End-Manway

Stark S Series Filtration Systems

42" Dia. Wound A, B, & C-Style

Stark AQ Series Filter Vessels

48" and 60" Dia. Wound A, B, & C-Style

Stark V Series Filter Vessels

Deep-Bed Vertical Filters

Additionally, this viewport is available as an upgrade on our 50 psi unwound **L Series** stackable filters. To specify, please use part number **B4852VPU: Upgrade to Manway with Viewport, L Series Filters**. This enhancement will similarly be available as an upgrade on our **Pentair Water Pool and Spa** branded **THS Series**® filters.

Please contact **Paragon Aquatics (845) 463-7200** for more information.
